The advances made in vascular biology in the last 25 years have considerably changed the perception that one could have of the endothelial cells. Once considered as a diffusion barrier preventing the access of the blood cells to the vascular matrix, the endothelium is now recognized as playing a major role in the control of blood fluidity, platelet aggregation, and vascular tone, but also in immunology, inflammation, angiogenesis, and for serving as a metabolizing and an endocrine organ. -- from the preface Cardiovascular diseases, so prevalent in the Western world during the twentieth century, could well become the scourge of the twenty-first century in emerging countries as well as the West. Endothelial dysfunction linked to an imbalance in the synthesis and/or release of contracting and relaxing factors is often evoked to explain the initiation of the cardiovascular pathology or its development and perpetuation. Two decades ago, when nitric oxide was demonstrated to mediate endothelium-dependent relaxations, the vascular world seemed convinced that nitric oxide was the...
