THE WARM AND THE COLD AGES OF THE EARTH IN THE NORTHERN LATITUDES (CLASSIC REPRINT) (PAPERBACK)

Forgotten Books, United States, 2015. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from The Warm and the Cold Ages of the Earth in the Northern Latitudes It is evidenced by incontrovertible testimony that large regions of the earth, bordering upon the Arctic Circle, and at some points extending far south into the temperate zone, were at one time under a warm and humid atmosphere. That this climatic state was of long duration is fully proven by the coal fields, by the great quantity of animal and vegetable fossil remains, product and growth of a tropical climate, now found in such abundance over a large extent of territory near the Arctic circle. There is also abundant testimony in support of the conclusion that this tropical atmosphere, which for ages prevailed over so large a part of the northern hemisphere, lost heat, and was transformed into one extremely frigid, and that at a later age the atmosphere, over a considerable and perhaps the greater part of this cold region, acquired heat, from some source, sufficient to melt the ice and change the climate from a frigid to a temperate one. Various theories have been promulgated by learned and scientific scholars to account for these great changes in the climate and the long duration of each of these opposite climatic conditions. It has been advanced by some speculators that what is now the equator has been, at some time in the past, the poles, and the latter the equator of the earth. Independent of the improbability of such a change having taken place, one such change, even if it had occurred, would not account for the change from a frigid to the present temperate climate which now prevails over a large part of this once...
