College Publications. Paperback. Condition: New. 326 pages. Dimensions: 9.1in. x 6.1in. x 1.0in. The novel use of symbolism in early modern mathematics poses both philosophical and historical questions. How can we trace its development and transmission through manuscript sources Is it intrinsically related to the emergence of symbolic algebra How does symbolism relate to the use of diagrams What are the consequences of symbolic reasoning on our understanding of nature Can a symbolic language enable new forms of reasoning Does a universal symbolic language exist which enables us to express all knowledge This book brings together a collection of papers that address all these and related questions which were initially posed on a conference held in Ghent (Belgium) in August 2009. Scholars working on philosophy of science, history of philosophy and history of mathematics provide an insight into the role and function of symbolic representations in the development of early modern mathematics. The papers cover the period from early abaco arithmetic and algebra (14th century) up to Leibniz (early 18th century). This item ships from multiple locations. Your book may arrive from Roseburg,OR, La Vergne,TN. Paperback.
