

Impact of Coastal Shrimp Farming on Water Quality and Macroenthos

Filesize: 7.75 MB

Reviews

Unquestionably, this is actually the very best work by any article writer. It usually does not price a lot of. Once you begin to read the book, it is extremely difficult to leave it before concluding.
(Augustine Pfannerstill)

Book Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Negative environmental impacts of coastal aquaculture to the adjacent ecosystems seem to surpass its benefits and thus, the sector is receiving increasing criticism. This study, sought to determine the relative changes in some water quality variables in the system as direct effect of shrimp farming. Benthic macro-invertebrates were also used as bio-indicators. Overall results showed that farming system did not cause significant and irreversible changes in water quality of the system. Conversely, dominance of opportunistic and pollution-tolerant taxa along the effluent creek was an indication that the system has the potential to cause environmental stress. Baseline data from the study would create awareness of the public to the potential threats the sector has to the adjacent ecosystems; it would contribute information for environmental protection and sustainable coastal aquaculture development. Similarly, its data would assist further studies on the environmental impacts, and contribute to the development of a support system for appropriate decision-making and planning for guiding and regulating coastal aquaculture development in Tanzania. | Format: Paperback | Language/Sprache: english | 196 pp.
