## Crystal Growth of Silicon for Solar Cells

By Kazuo Nakajima

Springer-Verlag Gmbh Okt 2009, 2009. Buch. Condition: Neu. Neuware - This book, a continuation of the series 'Advances in Materials Research,' is intended to provide the general basis of the science and technology of crystal growth of silicon for solar cells. In the face of the destruction of the global environment, the degradation of world-wide natural resources and the exhaustion of energy sources in the twenty-first century, we all have a sincere desire for a better/safer world in the future. In these days, we strongly believe that it is important for us to rapidly develop a new environment-friendly clean energy conversion system using solar energy as the ultimate natural energy source. For instance, most of our natural resources and energy sources will be exhausted within the next 100 years. Specially, the consumption of oil, natural gas, and uranium is a serious problem. Solar energy is the only ultimate natural energy source. Although 30% of total solar energy is reflected at the earth's surface, 70% of total solar energy can be available for us to utilize. The available solar energy amounts to several thousand times larger than the world's energy consumption in 2000 of about 9,000 Mtoe (M ton oil equivalent). To manage 10% of the world's energy consumption at 2050 by solar energy, we must manufacture 40 GW solar cells per year continuously for 40...

### Reviews

*The best book i actually read through. I have got read and so i am sure that i am going to going to read through yet again yet again down the road. You can expect to like the way the author compose this pdf.*

-- **Ludie Willms**

*This book is wonderful. It really is written in easy words and never difficult to understand. I am quickly can get a satisfaction of reading a created ebook.*

-- **Carley Huels**
