

The Lymphatic Fluid and T-Cell Receptor V Expression in Peripheral Blood Mononuclear Cells (Pbmcs) of Patients with Wuchereria Bancrofti Infection

By Magapu Solomon Sudhakar

Grin Verlag GmbH. Paperback. Condition: New. 238 pages. Dimensions: 8.3in. x 5.8in. x 0.5in. Doctoral Thesis Dissertation from the year 2006 in the subject Medicine - Biomedical Engineering, grade: TEXTBOOK-PUBLICATION, Anna University (-), course: Ph. D. , language: English, comment: A THESIS Submitted by M. SOLOMON SUDHAKAR in the fulfilment for the award of the degree of DOCTOR OF PHILOSOPHY , abstract: Lymphatic filariasis (LF) is a disease that is currently the target of a major global initiative for elimination. During the past decade, both the treatment and the control strategies for LF have undergone major paradigm shifts-due to rapid increase in knowledge and understanding of LF that is derived directly from a series of commendable progress made by scientific and medical research communities. In pursuit of understanding LF a disease to which a social stigma is attached, the chronic pathology (CP) of LF was taken as a model to understand the immunopathological mechanisms that lead to acute lymphangitis and lymphadenitis, in filarial infections, harboring Wuchereria bancrofti. It is a well established fact that elephantiasis is a consequence of immune-reactivity to adult worm antigens. Therefore, it was thought that T-cells infiltrating the lesions in chronic-pathology disease could augment for elevated...
