Reviews

This type of pdf is every little thing and helped me searching forward and more. It can be written in easy words and phrases and never hard to understand. You will not really feel monotony at anytime of your respective time (that's what catalogues are for about should you request me).

Condition: New. Publisher/Verlag: Südwestdeutscher Verlag für Hochschulschriften | The influence of heat and radiation heat conduction on the hydrodynamics of fission ignited fusion processes | The process of fusion boosted fission goes along with a large amount of important physical processes. Beside implosion and expansion activities under influence of fission and fusion processes, the effect of heat radiation becomes important at high temperatures. Theoretically, such systems are described by hydrodynamical equations. The interaction of matter, neutrons and radiation is determined by the neutron and radiation transport equation. Additionally, adequate models for the fusion process and the equation of states are needed. By the help of the program system STEALTH-MCNP the influence of material properties, neutron and radiation transport has been simulated numerically. The impact of heat radiation in fission ignited fusion processes has been studied within this thesis. One- and multi-group approximations of the radiation cross sections for fissile materials have been found. The problem of radiation transport is approximately solved by the radiation heat conduction formalism. The estimation of the radiation coefficients, the fusion model and the solution of the radiation transport problem are based on assuming the existence of a local thermal equilibrium. | Format: Paperback | Language/Sprache: english | 192 gr | 220x150x7 mm | 132 pp.
