

## Unitary Reflection Groups Australian Mathematical Society Lecture Series

By Gustav I. Lehrer

Cambridge University Press. Paperback. Book Condition: New. Paperback. 302 pages. Dimensions: 8.9in. x 6.0in. x 0.6in. A complex reflection is a linear transformation which fixes each point in a hyperplane. Intuitively, it resembles the transformation an image undergoes when it is viewed through a kaleidoscope, or arrangement of mirrors. This book gives a complete classification of all groups of transformations of  $n$ -dimensional complex space which are generated by complex reflections, using the method of line systems. In particular: irreducible groups are studied in detail, and are identified with finite linear groups; reflection subgroups of reflection groups are completely classified; the theory of eigenspaces of elements of reflection groups is discussed fully; an appendix outlines links to representation theory, topology and mathematical physics. Containing over 100 exercises ranging in difficulty from elementary to research level, this book is ideal for honors and graduate students, or for researchers in algebra, topology and mathematical physics. This item ships from multiple locations. Your book may arrive from Roseburg, OR, La Vergne, TN. Paperback.

### Reviews

*This pdf may be worth acquiring. It can be written in easy words and phrases and not hard to understand. I am pleased to tell you that this is basically the finest book I have read through during my personal existence and might be the greatest pdf for at any time.*

-- Jeffry Tromp

*Comprehensive guide for publication lovers. It absolutely was written really flawlessly and valuable. You won't really feel monotony at whenever you want of your own time (that's what catalogs are for concerning if you ask me).*

-- Rowan Gerlach II
