

Battlefield Automation: Armys Air Defense Command and Control System Status and Program Issues: Nsiad-90-12br

By -

Bibliogov. Paperback. Book Condition: New. This item is printed on demand. Paperback. 22 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. Pursuant to a congressional request, GAO provided information on the technical performance, delivery schedules, and cost of the Armys Forward Area Air Defense Command, Control, and Intelligence System (FAAD C2I), focusing on the status of four components: (1) computers and software for system automation of command and control functions; (2) a ground-based sensor to detect and track aircraft; (3) an aerial sensor to detect helicopters and other low-flying aircraft hidden from the ground-based sensors view; and (4) devices to distinguish between friendly and threat aircraft. GAO found that the Army: (1) delayed its fielding of the computer and software component from fiscal year (FY) 1991, and deferred some of the components capabilities to allow fielding an initial system in FY 1993; (2) delayed its plan for FY 1991 deployment of the nondevelopmental ground-based sensor so that it could make performance specifications less stringent; (3) scheduled ground-based sensor deployment for FY 1996, and planned to incorporate more advanced technology as it became available to fully meet its requirements; (4) deferred development and deployment of the aerial sensor, for which it had not...
