Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1856 edition. Excerpt: .to the distance of the eye; and if this distance were exceedingly increased. the whole stratum might at last be drawn together into a lucid spot of any shape, according to the position, length and height of the stratum. In order to determine those points, Sir W. Herschel put in practice a method which he calls gaging the heavens, which consists in repeatedly counting the number of stars in the fields of view very near each other, by which he obtained I THE MILKY WAY. mean of the number of stars in that part of the heavens. He then proceeds on the supposition deduces the length of his visual ray, or the distance through which his telescope had penetrated, or, in other words, the distance of the remotest stars in that particular region of the heavens. To illustrate this, let us suppose the Milky Way to be a nebula, and that the sun is not placed in its center. Then, on the supposition that the stars are nearly equally scattered, it is evident that the part of the Milky Way where the stars are the most numerous extend farthest from the sun, and the parts where they are less numerous must extend to a less distance. Proceeding on these grounds, Sir W. Herschel found the length of his visual ray for different parts of the heavens. In some cases he found it equal to 497 times the distance of Sirius, supposed to be the...
