

## The Popular Science Monthly: November, 1914 (Classic Reprint) (Paperback)

By Unknown Author

Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*. Excerpt from The Popular Science Monthly: November, 1914 The three species of oaks referred to are Quercus agrifolia, the encina oak, Q. Lobata, the roble oak, and Q. Douglasii, the blue or Douglas oak. The roble oak and Douglas oak are deciduous. The encina oak is the familiar live-oak of the coastwise valleys. The roble oak is the valley oak par excellence, and is probably the largest California species of the genus. The largest specimen reported is 150 feet in height and 25 feet in circumference four feet above the ground.1 The writer also saw a Specimen near Clear Lake, which had a Spread of top estimated to be 144: feet. In addition to being of large size, the roble oak is unusually beautiful and graceful, with long and slender pendant secondary branches, which occasionally nearly sweep the ground. If not strictly confined to moist soils, it at least attains its best development where the soil is moist and the depth to the level of perennial water is not so great as to be beyond the reach of the roots. The encina oak...
