CHARACTERISTICS OF TWO-DIMENSIONAL TRIANGULAR AND THREE-DIMENSIONAL FACE-CENTERED-CUBIC PHOTONIC CRYSTALS

Biblioscholar Nov 2012, 2012. Taschenbuch. Book Condition: Neu. 246x189x11 mm. This item is printed on demand - Print on Demand Neuware - Photonic crystals (PhC's) are periodic structures of differing dielectrics that create a photonic band gap (PBG). A PBG, in turn, inhibits the propagation of electromagnetic waves of a specific frequency range. This thesis focuses on the fabrication and characterization of triangular-structured, two-dimensional PhC's with a PBG designed for visible wavelengths and with applications in visible integrated photonic systems. A...

Reviews

The publication is straightforward in study safer to recognize. It is written in straightforward words and never hard to understand. It has been printed in an extremely straightforward way and it is just after I finished reading this book through which basically modified me, affect the way I think.

-- **Percy Bernhard**

This ebook may be worth getting. I actually have read through and I am sure that I am going to likely to read through again once more down the road. You will not sense monotony at whenever you want of your respective time (that's what catalogues are for relating to should you check with me).

-- **Mr. Golden Flatley**

Extremely helpful for all class of folks. It is really simplified but excitement from the 50 percent of your ebook. You won't sense monotony at any moment of your time (that's what catalogs are for about if you check with me).
